- \*1 The generation capacity for solar power plants is based upon the maximum output of each solar power plant's modules, and the generation capacity for biomass power plants is based upon the gross capacity. Both list generation capacity at month end.
- 2 The planned electricity sales figures are calculated by RENOVA at renewable energy power plants operated in Japan.
- \*3 Existing plants refer to those which have been in operation for at least 13 months.
- \*4 There was an outage at the biomass power plant due to the scheduled annual maintenance.
- '5 New power plants are scheduled to start operating during the month.

#### 2. Monthly Electricity Sales by Plant

<sup>\*6</sup> The fixed purchase price, exclusive of consumption tax, is based upon the FIT Scheme for each power plant and may differ from the actual electricity sale price.

### 3. Status of output curtailment

In May 2024, Each Electric Powers, Incorporated. issued an output control instruction and a part of power plants operated by RENOVA stopped generating electricity.

As the effect on the consolidated financial forecast for the fiscal year ended March 31, 2025 was minor, the total amount of power generation loss was 0.232% (Total power generation due to output restriction in May 2024) of the annual revenue plan for all power plants.

In the process of setting planned full-year figures for electricity sales, RENOVA takes into account certain output control risks and weather impact risks in the power generation business.
